55776 Off-Line Driver

Kamasa approaches the problem from a different angle.

For over thirty years Kamasa has pioneered new ideas within the tool industry. With an objective to be at the forefront of design and innovation, Kamasa has developed the ground breaking Off-Line Driver.

The Off-Line Driver (part 55776) harnesses the ability to drill and fix in areas where traditional powers tools should in reality be ineffective. It allows use hard up against walls, at challenging angles and in confined areas.

Designed for resilience, the Off-Line Driver delivers accuracy and precision. It boasts a quick chuck facility for easy changes, as well as a specially designed rotating outer sleeve for ease of use. Featuring 1/4" D hexagon shaft, the Off-Line Driver provides versatility to do what actually should be impossible.

For more information on the revolutionary Off-Line Driver please call 01926 815000 or visit www.offlinedriver.info
